Chapter 1

Group-Level Data

1.1 The EPR Universe

The sample universe of ethnic groups in the RFE group-level data is adopted from the EPR (Ethnic Power Relations) Core dataset [Vogt et al. ming] for more detailed information concerning versions and sources see [3.2]. Ethnic groups are included in the EPR Core dataset according to a two-step coding procedure:

1.1.1 Country Selection

Firstly, the EPR Core dataset defines a time-variant list of countries for which ethnic groups are coded. Specifically, the EPR Core dataset covers all countries in the period 1946 - 2013 that meet the following criteria:

(i) Administered by an intact sovereign state, i.e. overseas colonies and failed states are not included.

(ii) Population in 1990 is greater than or equal to 500'000 inhabitants.

Newly independent states are included in the dataset beginning with the year of independence. For example, Macedonia (independent on 20/11/1991) is included from 1991 onwards. Given these criteria, the EPR Core dataset covers a total of 8752 country-years from 165 countries.

1.1.2 Group Selection

Secondly, ethnic groups are coded on the basis of this list of country-years. For this purpose, the EPR Core dataset defines ethnicity as any subjectively experienced sense of

\[1\] However, countries considered “administered” by a failed state are included in the dataset if the period during which they are coded as failed states falls in between periods when the country meets the EPR Core dataset inclusion criteria. During these periods, however, the coding on the ethnic group level (see below) is not continued.
commonality based on the belief in common ancestry and shared culture. Given this definition, an ethnic group (i.e. a group of individuals sharing a common ethnicity) is included in the EPR Core dataset if it is politically relevant at least once in the sample period. An ethnic group is classified as politically relevant if at least one political organization claims to represent it in national politics or if its members are subjected to state-led political discrimination.

With these two selection procedures in place, the EPR Core dataset identifies 817 politically relevant ethnic groups (before considering hierarchies, see 1.2.3) in 141 countries across the globe for the period 1946 - 2013. For the remaining 24 countries, no ethnic group is coded as politically relevant during the entire sample period. For these cases, national placeholder groups are defined, which are coded as politically irrelevant for the entire sample period (e.g. Germans in Germany).²

1.2 Group Activity, Relevancy, and Hierarchies

The unit of observation in the RFE group-level data is the ethnic-group-year. An EPR ethnic group is included in the RFE group-level data for all years during which the group’s host state meets the EPR inclusion criteria (see 1.1). Consequently, researchers should note that ethnic groups are included in the RFE group-level data even if they are currently inactive or irrelevant, two concepts that are discussed subsequently.

1.2.1 Group Activity

An ethnic group is deemed active in a given group-year if it is currently physically present in a country and is not currently represented by an active ancestor or descendant (see below). Physical presence may be altered through border changes or large migration flows. In the RFE group-level data, whether a group is active during a given group-year is indicated by the isactive variable.

1.2.2 Group Relevance

An ethnic group is deemed relevant in a given group-year if, in accordance to the EPR 2014 definition, at least one political organization claims to represent it in national politics or if its members are subjected to state-led political discrimination (for more information, see the EPR 2014 codebook at http://www.icr.ethz.ch/data/epr). Due to the EPR inclusion criteria (see above), all groups in the RFE group-level data except placeholder groups are coded as relevant at least once during the sample period. Group relevance and activity are nested concepts, i.e. a group can only be relevant if it is active. In the RFE group-level data, whether a group is relevant during a given group-year is indicated by the irrelevant variable.

²These national placeholder groups are relevant for the coding of transnational ethnic links in the EPR-TEK data.
1.2.3 Group Hierarchies

Building on the EPR dataset, the RFE group-level data tracks hierarchical group relationships over time. There are two kinds of hierarchical transformations that an ethnic group may experience:

**Split**  An ethnic group may split into \( n (n \geq 2) \) smaller groups. This is the case if the politically relevant concept of ethnicity is redefined over time and individuals that have formerly been considered part of the same ethnic group are now considered members of distinct groups.

**Unification**  Several ethnic groups may unify into one larger group. This is the case if individuals that have formerly been considered part of different ethnic groups are now considered members of the same politically relevant ethnic group.

If either of these hierarchical transformations occur, the RFE group-level data defines a hierarchical relationship between the groups involved. The hierarchically superior group in these transformations (i.e. the group defined by the more inclusive definition of ethnicity) is called the *ancestor group*, whereas the hierarchically inferior groups are called *descendant groups*. Consequently, a split is a transformation from one ancestor group into several descendant groups, and a unification is a transformation from several descendant groups into one ancestor group.

Hierarchical transformations are mirrored in the RFE group-level data in three different ways:

- Hierarchical transformations affect *group activity*: In the case of a split, the descendant groups are coded as inactive in the group-years prior to the split, whereas the ancestor group is coded as inactive in the group-years after the split. Analogously, in the case of a unification, the ancestor group is coded as inactive prior to the unification, and the descendant groups as inactive after the unification. This is to avoid that the same individuals in a country are double-counted as members of several different hierarchically related ethnic groups at the same time.

- Hierarchical transformations are tracked by the following variables: *active_anc_groupid* and *active_desc_groupid_arr* are strings of groupids that are non-missing if the group in question has one or more currently active ancestors or descendants. Note that these variables are mutually exclusive in the sense that a group may only have an active ancestor or one or more active descendants. *relevant_anc_groupid* and *relevant_desc_groupid_arr* are analogously defined variables indicating currently relevant ancestors and descendants.

- Hierarchical relationships are reflected in variables of the *family type*: The *family* prefix indicates that a variable applies to this group, its active ancestor group (if any), or its active descendant groups (if any). For example, the *family_warhist* indicates
the number of conflict onsets the given group or any of its ancestors or descendants have experienced up until this year. *family* type variables are useful for tracking phenomena that are a function of time while considering that members of a given ethnic group may have been members of another hierarchically related ethnic group in the past.

1.3 Ethnic Conflict Data

The information on ethnic conflicts in the RFE group-level data is compiled from two different sources: The ACD2EPR dataset (Wucherpfennig et al. 2012), the UCDP Actor Dataset (Uppsala Conflict Data Program 2014), and the Uppsala/PRIO Armed Conflict Database (ACD) (Gleditsch et al. 2002). For more information on these datasets and the exact versions used, please see 3.2. These sources allow the identification of ethnic conflicts and their mapping onto the ethnic groups in the EPR Core Dataset 2014 (EPR) in three steps:

- The ACD2EPR dataset links UCDP rebel organizations to the EPR ethnic groups between 1946 and 2013.
- The UCDP Actor Dataset lists, among others, all rebel organizations involved in Internal or Internationalized Armed Conflicts.
- For each of these rebel–ethnic group dyads we code the occurrence, duration, and intensity of intrastate conflicts based on the information in the ACD dataset.

The remainder of this section briefly describes the structure of these data sources and establishes how the latter are used to code the conflict related variables in the RFE group-level data.

1.3.1 ACD2EPR

The units of observation in the ACD2EPR dataset are rebel-organization/ethnic-group dyads. For every rebel actor included in the UCDP Actor Dataset, ACD2EPR reports whether the organization can be linked to any EPR group in the same country through ethnic claims or significant ethnic recruitment. More specifically, for the RFE group-level conflict data, a link between a rebel organization and an ethnic group is coded if the ACD2EPR *claim* variable indicates an explicit or implicit ethnic claim by the rebel organization (*claim >= 1*), and the *recruitment* variable indicates that the rebel organization has recruited from the respective ethnic group significantly (*recruitment = 1*). Note

---

3Note that previous versions of the ACD2EPR data linked ethnic groups to rebel organizations in the Non-State Actor dataset by Cunningham et al. (2009). These actors are now fully integrated into the UCDP Actor Dataset, which therefore provides backwards compatibility to the the NSA data.

4The original ACD2EPR dataset also establishes links between rebel organizations and ethnic groups among other dimensions, but these are not relevant for the RFE group-level data conflict coding.
that the ACD2EPR coding is time invariant. Thus, links between rebel organizations and ethnic groups exists for the entire lifespan of a rebel organization.\(^5\) The RFE coding rule is that for a definite link between an ethnic group and a rebel organization to be established, the two must be connected through both claim and recruitment. With this coding rule in place, we are able to produce a time invariant one-to-many table connecting EPR groups one or multiple rebel organizations (if any).

### 1.3.2 UCDP Actor Dataset

The UCDP Actor Dataset dataset lists all actors and the UCDP IDs of the armed conflicts that these actors are involved in (see 1.3.3). By subsetting the list to only include non-state actors that are involved in Internal and Internationalized Armed Conflicts, we obtain the initial list of rebel organizations for which the ACD2EPR dataset codes links to EPR groups. Consequently, combining the EPR-group-to-rebel-organization table derived above with the Actor Dataset, we are able to create a new table indicating whether EPR groups are involved in one or more ACD conflicts through links with one or more rebel organizations.

### 1.3.3 ACD

Conflicts in the ACD dataset follow the UCDP conflict definition (please see 3.2 for links to more information and references) and are assigned a unique UCDP ID. ACD conflicts are assigned to one of four categories: Extrasystemic, Interstate, Internal, and Internationalized Internal Conflicts. Of these types, only the latter two are relevant for the RFE group-level conflict coding, since we focus exclusively on ethnic civil wars.

ACD conflicts are distinguished along the incompatibility they originate from, not their temporal dimension. Hence, a conflict that ends and reoccurs after a substantial period of time is assigned the same UCDP ID, regardless of the time period separating the actual conflict episodes, as long as the incompatibility remains the same. The ACD dataset provides information on the temporal dimension of conflict termination and recurrence with a variable indicating the end of a conflict episode, whereas according to the ACD coding rules, a conflict episode ends in a given year if there is no conflict-related activity in the next calendar year.\(^6\) For the purpose of the RFE group-level data conflict coding, this definition is altered: For all conflict onset and incidence variables in the RFE group-level dataset, a conflict episode is only considered terminated if there is no conflict-related activity in the following two calendar years. This recoding of ACD conflict episode is adopted in order to prevent an inflation of conflict episodes (and thus conflict onsets, see 1.3.4) in low-activity conflicts that reoccur repeatedly. With this 2-year episode coding rule in place, we are able to merge the table mapping EPR groups onto ACD conflicts discussed above (see 1.3.2) to the modified ACD conflict table, and thus create a time-variant dataset.

\(^5\)“Lifespan” refers to the period(s) during which a rebel organization is active in intrastate wars identified by the ACD.

\(^6\)“Conflict-related activity” refers to the UCDP threshold of at least 25 battle deaths per annum.
indicating whether and when EPR groups are involved in ACD conflict episodes through links with one or several rebel organizations in the UCDP Actor Dataset.

1.3.4 Conflict Onset

The RFE group-level data follows a standard conflict onset coding based on the mapping of conflicts onto ethnic groups discussed above. Specifically, the coding rule imposed is that ethnic group $G$ experiences conflict onset in year $t$ if

(i) a rebel organization linked to $G$ enters an ACD conflict active in year $t$,

and

(ii) no rebel organization linked to $G$ has been active in the same ACD conflict in the two calendar years preceding $t$.

Rule (ii) ensures that conflicts linked to ethnic groups via multiple rebel organizations don’t generate an excessive number of conflict onsets simply because individual rebel organizations start and stop fighting while the overall conflict continues to be violent.

1.3.5 KO and DO Options

The RFE group-level data conflict onset variables come in two variants: The KO and the DO option. KO stands for Keep Ongoing and is the default option. Conflict onset variables with the KO option take the value of 1 for group-years in which a group experiences conflict onset (see 1.3.4), and 0 in all other years.

DO stands for Drop Ongoing and represents a slightly more advanced coding. DO conflict onset variables indicate conflict onset in the same manner as the KO variables, but are censored if a given group has been involved in any conflict in the previous two calendar years. The reasoning underlying this definition is that in these years, positive conflict onset codings are highly unlikely due to the rules established in section 1.3.4, and thus in many statistical applications these observations will be excluded from the analysis.

1.3.6 Conflict Incidence

The RFE group-level data includes a number of conflict incidence variables, which indicate whether in a given year a group is involved in an ACD conflict episode through links with one or several rebel organizations. Conflict incidence variables assume the value of 1 in years when at least one rebel organization linked to an ethnic group is involved in an ACD conflict episode, and 0 otherwise.

Please note that because of the 2-year episode coding rule imposed on the ACD data, conflict episodes may terminate for a single calendar year and then continue without a new group-level conflict onset occurring (see 1.3.3 and 1.3.4).
1.4 Geographical Data

The group-level RFE offers two types of variables referring to geospatial information. The variables with the `geo` and `ggp` labels are derived directly from GeoEPR data set, version 2014. The actual spatial information (i.e., the group-level settlement polygons) is not distributed via the RFE, but can be downloaded at [http://www.icr.ethz.ch/data/geoepr](http://www.icr.ethz.ch/data/geoepr).

You may use the `groupid` in conjunction with the `ggp_startdate` and `ggp_enddate` variables to merge the RFE group-year data with the spatial information contained in the GeoEPR 2014 shapefile.

The remaining geospatial variables are raster derived data, i.e. variables creating by overlaying the GeoEPR 2014 settlement polygons with various geospatial raster datasets. Raster derived variables with the with the `_total` label are derived by taking total sum of all raster values (e.g., population, nightlights) intersecting with a given GeoEPR settlement polygon. Raster derived variables with `_corr` label are derived by first classifying settlement areas depending on whether they intersect with the settlement polygons of other groups within the same country. In cases where settlement polygons overlap, the sum of the raster values are divided evenly among the present groups. Hence, this coding ensures that raster values (e.g., local population or nightlight emissions) are not double counted.

1.5 TEK Data

All variables with the label `tek` are derived from the Transborder Ethnic Kin dataset, version 2014. For more information, see [http://www.icr.ethz.ch/data/tek](http://www.icr.ethz.ch/data/tek).

1.6 Ethnic Dimensions Data

All variables with the label `ic` are derived from the EPR Ethnic Dimensions dataset, version 2014. For more information (including value label definitions), see [http://www.icr.ethz.ch/data/ic](http://www.icr.ethz.ch/data/ic).

1.7 Group-Level Variables

1.7.1 `gwgroupid`

- **Type:** Integer
- **Value Range:** N
- **Description:** Unique ID of ethnic group
- **Sources:** EPR
1.7.2 year
Type: Integer
Value Range: N
Description: Year of observation (Group-Level)
Sources: NA

1.7.3 groupname
Type: String
Value Range: NA
Description: Name of ethnic group
Sources: EPR

1.7.4 countries.gwid
Type: Integer
Value Range: N
Description: Unique GW ID of country
Sources: GW

1.7.5 countryname
Type: String
Value Range: NA
Description: Name of country
Sources: GW

1.7.6 isactive
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group is physically present in a country and not represented by active ancestor or descendant groups
Sources: EPR

1.7.7 isrelevant
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group is politically relevant
Sources: EPR
1.7.8  groupsize
Type: Double Precision
Value Range: (0, 1]
Description: This group’s population size as a fraction of the country’s total population
Sources: EPR

1.7.9  statusid
Type: Integer
Value Range: N
Description: ID indicating this group’s political status
Sources: EPR

1.7.10  statusname
Type: String
Value Range: NA
Description: Name of the corresponding value on StatusID
Sources: EPR

1.7.11  regaut
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group has meaningful political autonomy.
Sources: EPR

1.7.12  status_pwrrank
Type: Integer
Value Range: N
Description: Political status of this group ranked on a scale from 1 (discriminated) to 7 (monopoly); self-exclusion ranks at 3.
Sources: EPR

1.7.13  status_monopoly
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘monopoly’
Sources: EPR
1.7.14 status_dominant
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘dominant’
Sources: EPR

1.7.15 status_senior
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘senior partner’
Sources: EPR

1.7.16 status_junior
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘junior partner’
Sources: EPR

1.7.17 status_selfexclusion
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘self-exclusion’
Sources: EPR

1.7.18 status_powerless
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status ‘powerless’
Sources: EPR
1.7.19 status_discrim
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is assigned the status 'discriminated'
Sources: EPR

1.7.20 status_egip
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is an EGIP (status 'junior partner' or higher)
Sources: EPR

1.7.21 status_excl
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group is a MEG (status 'self-exclusion' or lower)
Sources: EPR

1.7.22 egip_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating the number of EGIPs in this group’s country
Sources: EPR

1.7.23 excl_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating the number of MEGs in this group’s country
Sources: EPR
1.7.24 **rlvt_groups_count**

- **Type:** Integer
- **Value Range:** N
- **Description:** Count variable indicating the number of relevant groups in this group’s country
- **Sources:** EPR

1.7.25 **actv_groups_count**

- **Type:** Integer
- **Value Range:** N
- **Description:** Count variable indicating the number of active groups in this group’s country
- **Sources:** EPR

1.7.26 **lpop**

- **Type:** Double Precision
- **Value Range:** [0, 1]
- **Description:** Sum of the ethnically relevant population in this group’s country (as a fraction of total population)
- **Sources:** EPR

1.7.27 **lsize**

- **Type:** Double Precision
- **Value Range:** [0, 1]
- **Description:** This group’s population size as a fraction of the ethnically relevant population of this group’s country (groupsize / lpop)
- **Sources:** EPR

1.7.28 **egippop**

- **Type:** Double Precision
- **Value Range:** [0, 1]
- **Description:** Sum of the population of all EGIP groups in this group’s country (as a fraction of total population)
- **Sources:** EPR
1.7.29  legippop
Type: Double Precision
Value Range: [0, 1]
Description: EGIP population as a fraction of ethnically relevant population in this group’s country (egippop / lpop)
Sources: EPR

1.7.30  exclpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of the population of all MEG groups in this group’s country (as a fraction of total population)
Sources: EPR

1.7.31  lexclpop
Type: Double Precision
Value Range: [0, 1]
Description: MEG population as a fraction of ethnically relevant population in this group’s country (exclpo / lpop)
Sources: EPR

1.7.32  discrimpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of the population of all discriminated groups in this group’s country (as a fraction of total population).
Sources: EPR

1.7.33  ldiscrimpop
Type: Double Precision
Value Range: [0, 1]
Description: Discriminated population as a fraction of ethnically relevant population in this group’s country (discrimpop / lpop).
Sources: EPR
1.7.34 rbal
Type: Double Precision
Value Range: (0, 1]
Description: If this group is a MEG: groupsize / (egippop + groupsize);
If this group is an EGIP: groupsize / egippop
Sources: EPR

1.7.35 rlb
Type: Double Precision
Value Range: (0, 1]
Description: If this group is a MEG: lsize / (legippop + lsize); If this
group is an EGIP: lsize / legippop
Sources: EPR

1.7.36 downgraded1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has lost power
(according to the status.pwrrank variable) in the previous year
Sources: EPR

1.7.37 downgraded_excl1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has been down-
graded from EGIP to MEG in the previous year
Sources: EPR

1.7.38 downgraded_regaut1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group has lost political aut-
nomy in the previous year
Sources: EPR
1.7.39 upgraded1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has gained power
(according to the status_pwrrank variable) in the previous year
Sources: EPR

1.7.40 upgraded_excl1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has been upgraded from MEG to EGIP in the previous year
Sources: EPR

1.7.41 upgraded_regaut1
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group has gained political autonomy in the previous year
Sources: EPR

1.7.42 downgraded2
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has lost power
(according to the status_pwrrank variable) in the previous 2 years
Sources: EPR

1.7.43 downgraded_excl2
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has been downgraded from EGIP to MEG in the previous 2 years
Sources: EPR
1.7.44  downgraded_regaut2

Type:   Integer
Value Range:  [0; 1]
Description:  Binary flag indicating whether group has lost political autonomy in the previous 2 years
Sources:  EPR

1.7.45  upgraded2

Type:   Integer
Value Range:  [0; 1]
Description:  Binary flag indicating whether this group has gained power (according to the status.pwrrank variable) in the previous 2 years
Sources:  EPR

1.7.46  upgraded_excl2

Type:   Integer
Value Range:  [0; 1]
Description:  Binary flag indicating whether this group has been upgraded from MEG to EGIP in the previous 2 years
Sources:  EPR

1.7.47  upgraded_regaut2

Type:   Integer
Value Range:  [0; 1]
Description:  Binary flag indicating whether group has gained political autonomy in the previous 2 years
Sources:  EPR

1.7.48  downgraded5

Type:   Integer
Value Range:  [0; 1]
Description:  Binary flag indicating whether this group has lost power (according to the status.pwrrank variable) in the previous 5 years
Sources:  EPR
1.7.49  **downgraded_excl5**

Type: Integer  
Value Range: [0; 1]  
Description: Binary flag indicating whether this group has been downgraded from EGIP to MEG in the previous 5 years  
Sources: EPR

1.7.50  **downgraded_regaut5**

Type: Integer  
Value Range: [0; 1]  
Description: Binary flag indicating whether group has lost political autonomy in the previous 5 years.  
Sources: EPR

1.7.51  **upgraded5**

Type: Integer  
Value Range: [0; 1]  
Description: Binary flag indicating whether this group has gained power (according to the status_pwrrank variable) in the previous 5 years  
Sources: EPR

1.7.52  **upgraded_excl5**

Type: Integer  
Value Range: [0; 1]  
Description: Binary flag indicating whether this group has been upgraded from MEG to EGIP in the previous 5 years  
Sources: EPR

1.7.53  **upgraded_regaut5**

Type: Integer  
Value Range: [0; 1]  
Description: Binary flag indicating whether group has gained political autonomy in the previous 5 years  
Sources: EPR
1.7.54  downgraded10
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has lost power (according to the status_pwr_rank variable) in the previous 10 years
Sources: EPR

1.7.55  downgraded_excl10
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has been downgraded from EGIP to MEG in the previous 10 years
Sources: EPR

1.7.56  downgraded_regaut10
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group has lost political autonomy in the previous 10 years.
Sources: EPR

1.7.57  upgraded10
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has gained power (according to the status_pwr_rank variable) in the previous 10 years
Sources: EPR

1.7.58  upgraded_excl10
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has been upgraded from MEG to EGIP in the previous 10 years
Sources: EPR
1.7.59 upgraded_regaut10

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group has gained political autonomy in the previous 10 years
Sources: EPR

1.7.60 downgraded_hist

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has ever lost power (according to the status.pwrrank variable) since its first appearance in the EPR dataset
Sources: EPR

1.7.61 downgraded_excl_hist

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has ever been downgraded from EGIP to MEG since its first appearance in the EPR dataset
Sources: EPR

1.7.62 downgraded_regaut_hist

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether this group has ever lost autonomy since its first appearance in the EPR dataset

1.7.122 geo_typeid
Type: Integer
Value Range: N
Description: GeoEPR 2014 settlement type ID.
Sources: GEOEPR

1.7.123 geo_typename
Type: String
Value Range: NA
Description: GeoEPR 2014 settlement type name.
Sources: GEOEPR
1.7.124 geo_concentrated
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group’s settlement area is concentrated within its host country’s territory.
Sources: GEOEPR

1.7.125 geo_statewide
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group’s settlement area is statewide.
Sources: GEOEPR

1.7.126 geo_urban
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group’s settlement area is urban.
Sources: GEOEPR

1.7.127 geo_migrant
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group’s settlement area is migrant.
Sources: GEOEPR

1.7.128 geo_dispersed
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether group’s settlement area is dispersed.
Sources: GEOEPR
1.7.129 geo_unknown

Type: Integer
Value Range: \([0; 0]\)
Description: Binary flag indicating whether group’s settlement area is unknown.
Sources: GEOEPR

1.7.130 ggp_startdate

Type: Date
Value Range: NA
Description: Start-date of GeoEPR episode corresponding to this group-year.
Sources: GEOEPR

1.7.131 ggp_enddate

Type: Date
Value Range: NA
Description: End-date of GeoEPR episode corresponding to this group-year.
Sources: GEOEPR

1.7.132 area_sqkm

Type: Double Precision
Value Range: \(\mathbb{R}_{>0}\)
Description: Group’s settlement area in square kilometers (derived from GeoEPR).
Sources: GEOEPR

1.7.133 pop90_total

Type: Double Precision
Value Range: \(\mathbb{R}_{>0}\)
Description: Group’s population in 1990; derived by GeoEPR/CIESIN GRUMPv1 overlay. All population within group polygon is summed.
Sources: GRUMP, GEOEPR
1.7.134 pop90_corr
Type: Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Group’s population in 1990; derived by GeoEPR/CIESIN GRUMPv1 overlay. Population intersecting with multiple polygons is divided evenly.
Sources: GRUMP, GEOEPR

1.7.135 pop00_total
Type: Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Group’s population in 2000; derived by GeoEPR/CIESIN GRUMPv1 overlay. All population within group polygon is summed.
Sources: GRUMP, GEOEPR

1.7.136 pop00_corr
Type: Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Group’s population in 2000; derived by GeoEPR/CIESIN GRUMPv1 overlay. Population intersecting with multiple polygons is divided evenly.
Sources: GRUMP, GEOEPR

1.7.137 pop10_total
Type: Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Group’s population in 2010; derived by GeoEPR/CIESIN GRUMPv1 overlay. All population within group polygon is summed.
Sources: GRUMP, GEOEPR

1.7.138 pop10_corr
Type: Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Group’s population in 2010; derived by GeoEPR/CIESIN GRUMPv1 overlay. Population intersecting with multiple polygons is divided evenly.
Sources: GRUMP, GEOEPR
1.7.139 **nightlight_total**

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Stable nightlight emissions in group polygon; derived by GeoEPR/DMSP-OLS overlay. All nightlights within group polygon are summed.  
Sources: GEOEPR, DMSP

1.7.140 **nightlight_corr**

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Stable nightlight emissions in group polygon; derived by GeoEPR/DMSP-OLS overlay. Nightlights intersecting with multiple polygons are divided evenly.  
Sources: DMSP, GEOEPR

1.7.141 **gdp90_total**

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Group’s contribution to host country’s GDP in 1990; derived by GeoEPR/G-Econ overlay. All gross cell product within group polygon is summed.  
Sources: GEOEPR, GECON

1.7.142 **gdp90_corr**

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Group’s contribution to host country’s GDP in 1990; derived by GeoEPR/G-Econ overlay. Gross cell product intersecting with multiple polygons is divided evenly.  
Sources: GECON, GEOEPR

1.7.143 **gdp95_total**

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Group’s contribution to host country’s GDP in 1995; derived by GeoEPR/G-Econ overlay. All gross cell product within group polygon is summed.  
Sources: GEOEPR, GECON
1.7.144  gdp95_corr
Type: Double Precision
Value Range: \( \mathbb{R}_{>0} \)
Description: Group’s contribution to host country’s GDP in 1995; derived by GeoEPR/G-Econ overlay. Gross cell product intersecting with multiple polygons is divided evenly.
Sources: GECON, GEOEPR

1.7.145  gdp00_total
Type: Double Precision
Value Range: \( \mathbb{R}_{>0} \)
Description: Group’s contribution to host country’s GDP in 2000; derived by GeoEPR/G-Econ overlay. All gross cell product within group polygon is summed.
Sources: GEOEPR, GECON

1.7.146  gdp00_corr
Type: Double Precision
Value Range: \( \mathbb{R}_{>0} \)
Description: Group’s contribution to host country’s GDP in 2000; derived by GeoEPR/G-Econ overlay. Gross cell product intersecting with multiple polygons is divided evenly.
Sources: GECON, GEOEPR

1.7.147  gdp05_total
Type: Double Precision
Value Range: \( \mathbb{R}_{>0} \)
Description: Group’s contribution to host country’s GDP in 2005; derived by GeoEPR/G-Econ overlay. All gross cell product within group polygon is summed.
Sources: GECON, GEOEPR

1.7.148  gdp05_corr
Type: Double Precision
Value Range: \( \mathbb{R}_{>0} \)
Description: Group’s contribution to host country’s GDP in 2005; derived by GeoEPR/G-Econ overlay. Gross cell product intersecting with multiple polygons is divided evenly.
Sources: GECON, GEOEPR
1.7.149  elevsd
Type:       Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Standard deviation of gridded elevation measurements
(0.008330 decimal degree resolution) intersecting with
group polygon.
Sources:     GTOPO30, GEOEPR

1.7.150  meanelev
Type:       Double Precision
Value Range: $\mathbb{R}_{>0}$
Description: Mean elevation of territory intersecting with group poly-
gon.
Sources:     GTOPO30, GEOEPR

1.7.151  tek_groupid_arr
Type:       String
Value Range: NA
Description: String indicating comma-separated groupids of TEK
groups associated with this group
Sources:     TEK

1.7.152  tek_count
Type:       Integer
Value Range: N
Description: Count variable indicating number of TEK groups associ-
ated with this group
Sources:     TEK

1.7.153  tek_isrelevant
Type:       Integer
Value Range: $[0; 1]$  
Description: Binary flag indicating whether at least one of this group’s
TEK groups is currently politically relevant 
Sources:     TEK
1.7.154 tek_excl
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether at least one of this group’s TEK groups is currently politically excluded (MEG)
Sources: TEK

1.7.155 tek_egip
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating whether at least one of this group’s TEK groups currently has EGIP status; note: for this coding; placeholder groups are considered EGIP
Sources: TEK

1.7.156 ic_religion1
Type: String
Value Range: NA
Description: String indicating largest religion for this group
Sources: IC

1.7.157 ic_re1_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with largest religion
Sources: IC

1.7.158 ic_religion2
Type: String
Value Range: NA
Description: String indicating second largest religion for this group
Sources: IC

1.7.159 ic_re2_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with second largest religion
Sources: IC
1.7.160 ic_religion3
Type: String
Value Range: NA
Description: String indicating third largest religion for this group
Sources: IC

1.7.161 ic_rel3_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with third largest religion
Sources: IC

1.7.162 ic_language1
Type: String
Value Range: NA
Description: String indicating largest language for this group
Sources: IC

1.7.163 ic_lang1_size
Type: Double Precision
Value Range: (0, 1]
Description: Fraction of group associated with largest language
Sources: IC

1.7.164 ic_language2
Type: String
Value Range: NA
Description: String indicating second largest language for this group
Sources: IC

1.7.165 ic_lang2_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with second largest language
Sources: IC
1.7.166 ic_language3
Type: String
Value Range: NA
Description: String indicating third largest language for this group
Sources: IC

1.7.167 ic_lnag3_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with third largest language
Sources: IC

1.7.168 ic_phenotype1
Type: String
Value Range: NA
Description: String indicating largest phenotype class for this group
Sources: IC

1.7.169 ic_pheno1_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with largest phenotype class
Sources: IC

1.7.170 ic_phenotype2
Type: String
Value Range: NA
Description: String indicating second largest phenotype class for this group
Sources: IC

1.7.171 ic_pheno2_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with second largest phenotype class
Sources: IC
1.7.172  ic_phenotype3
Type: String
Value Range: NA
Description: String indicating third largest phenotype class for this group
Sources: IC

1.7.173  ic_pheno3_size
Type: Double Precision
Value Range: [0, 1]
Description: Fraction of group associated with third largest phenotype class
Sources: IC
Chapter 2
Country-Level Data

2.1 EPR Countries

The unit of observation in the RFE country-level data is the country-year. The sample universe of country-years in the RFE country-level data is adopted from the EPR (*Ethnic Power Relations*) dataset (Vogt et al.). Consequently, the country-years included in the RFE country-level dataset are equivalent to the country-years for which the EPR dataset codes ethnic groups, and thus for which the RFE group-level dataset provides information on the ethnic-group-level (see 1.1.1).

2.2 Country-Level Conflict Data

The information on intrastate conflicts in the RFE country-level data originates primarily from the UCDP ACD dataset (Gleditsch et al. 2002). Information on whether intrastate conflicts are coded as ethnic is added using the RFE group-level conflict data, which is compiled from the ACD2EPR dataset (Wucherpfennig et al. 2012) and the ACD dataset (Gleditsch et al. 2002). The remainder of this section briefly describes how the ACD data is aggregated into country-year format and elaborates the coding rules for country-level conflict onset and incidence.

2.2.1 ACD Aggregation

The ACD dataset codes inter- and intrastate armed conflicts on a yearly basis. Conflicts in the ACD dataset follow the UCDP conflict definition (please see 3.2 for links to more information and references) and are assigned a unique *UCDP ID*. ACD conflicts are assigned to one of four categories: Extrasystemic, Interstate, Internal, and Internationalized Internal Conflicts. Of these types, only the latter two are relevant for the RFE country-level conflict coding, since we focus exclusively on civil wars. ACD conflicts are distinguished along the incompatibility they originate from, not their temporal dimension. Hence, a conflict that ends and reoccurs after a substantial period of time is assigned the same UCDP ID,
regardless of the time period separating the actual conflict episodes, as long as the incompatibility remains the same. ACD conflicts are merged with the EPR country-level data by assigning each country-year observation one or several UCDP IDs if the ACD dataset reports an ongoing conflict in the respective country – according to ACD’s conflict location variable – and year.

2.2.2 Conflict Onset

In the RFE country-level data a conflict onset occurs if a country experiences an intrastate conflict in a given year, and the respective conflict (as identified via its UCDP ID) has been inactive in the given country in the previous two calendar years.

The RFE country-level data also offers conflict onset variables that distinguish between ethnic and non-ethnic conflicts. Conflict onsets are coded as ethnic if, according to the RFE group-level conflict data (see 1.3), at least one ethnic group is linked to the respective ACD conflict in the onset year. This implies that the number of ethnic conflict onsets defined in the RFE country-level data may differ from the aggregated number of onsets in the RFE group-level data, even though the two datasets are based on the same sources.

2.2.3 KO and DO Options

The RFE country-level data conflict onset variables come in two variants: The KO and the DO option. KO stands for Keep Ongoing and is the default option. Conflict onset variables with the KO option take the value of 1 for country-years in which a country experiences conflict onset (see 2.2.2), and 0 in all other years.

DO stands for Drop Ongoing and represents a slightly more advanced coding. DO conflict onset variables indicate conflict onset in the same manner as the KO variables, but are censored if a given country has experienced any conflict in the previous two calendar years. The reasoning underlying this definition is that in these years, positive conflict onset codings are highly unlikely due to the rules established in section 2.2.2, and thus in many statistical applications these observations will be excluded from the analysis.

2.2.4 Conflict Incidence

The RFE country-level data includes a number of conflict incidence variables, which indicate whether in a given year a country is involved in at least one ACD conflict. Conflict incidence variables assume the value of 1 in years when at least one ACD conflict episode is ongoing, and 0 in all other years.

2.3 Country-Level Information on Ethnic Groups

The RFE country-level data includes a number of variables referring to the composition of a country’s ethnic groups in terms of size and power status. This information is aggregated
directly from the RFE group-level data, which is based on the EPR 2014 dataset; for detailed information please see [1].

Furthermore, the EPR dataset includes a set of countries for which no ethnic group is coded as politically relevant during the entire period covered by the dataset. As elaborated above (see [1.1.2]), for these countries a placeholder-group is coded which remains politically irrelevant throughout the entire period covered by the dataset. The variable `cntr_Relevance` indicates for which countries this is the case. For these countries, all variables referring to aggregate group sizes or power status are coded as missing.

### 2.4 Country-Level Variables

#### 2.4.1 countries_gwid

- **Type**: Integer
- **Value Range**: N
- **Description**: Unique GW ID of country
- **Sources**: GW

#### 2.4.2 countryname

- **Type**: String
- **Value Range**: NA
- **Description**: Name of country
- **Sources**: GW

#### 2.4.3 year

- **Type**: Integer
- **Value Range**: N
- **Description**: Year of observation (Country-Level)
- **Sources**: NA

#### 2.4.4 egip_groups_count

- **Type**: Integer
- **Value Range**: N
- **Description**: Count variable indicating the number of EGIP groups in this country
- **Sources**: EPR
2.4.5 excl_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating the number of MEG groups in this country
Sources: EPR

2.4.6 regaut_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating number of groups with regional autonomy in this country.
Sources: EPR

2.4.7 regaut_excl_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating number of MEG groups with regional autonomy in this country.
Sources: EPR

2.4.8 regaut_egip_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating number of EGIP groups with regional autonomy in this country.
Sources: EPR

2.4.9 rlvt_groups_count
Type: Integer
Value Range: N
Description: Count variable indicating the number of relevant groups in this country
Sources: EPR
2.4.10  **actv_groups_count**

Type: Integer  
Value Range: N  
Description: Count variable indicating the number of active groups in this country  
Sources: EPR

2.4.11  **lpop**

Type: Double Precision  
Value Range: $\mathbb{R}_{\geq 0}$  
Description: Sum of the ethnically relevant population in this country (as a fraction of total population)  
Sources: EPR

2.4.12  **egippop**

Type: Double Precision  
Value Range: [0, 1]  
Description: Sum of the population of all EGIP groups in this country (as a fraction of total population)  
Sources: EPR

2.4.13  **legippop**

Type: Double Precision  
Value Range: [0, 1]  
Description: EGIP population as a fraction of ethnically relevant population in this country (egippop / lpop)  
Sources: EPR

2.4.14  **exclpop**

Type: Double Precision  
Value Range: [0, 1]  
Description: Sum of the population of all MEG groups in this country (as a fraction of total population)  
Sources: EPR
2.4.15 lexclpop
Type: Double Precision
Value Range: [0, 1]
Description: MEG population as a fraction of ethnically relevant population in this country (exclpo / lpop)
Sources: EPR

2.4.16 discrimpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of discriminated population in this country (as a fraction of total population).
Sources: EPR

2.4.17 ldiscrimpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of discriminated population as a fraction of ethnically relevant population in this country (discrimpop / lpop)
Sources: EPR

2.4.18 maxexclpop
Type: Double Precision
Value Range: [0, 1]
Description: Size of the largest MEG group in this country (as a fraction of total population)
Sources: EPR

2.4.19 limaxexclpop
Type: Double Precision
Value Range: [0, 1]
Description: Size of the largest MEG group in this country as a fraction of ethnically relevant population (maxexclpop / lpop)
Sources: EPR
2.4.20  regautpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of population with regional autonomy in this country (as a fraction of total population).
Sources: EPR

2.4.21  regautexclpop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of population with regional autonomy and excluded (MEG) in this country (as a fraction of total population)
Sources: EPR

2.4.22  regautegippop
Type: Double Precision
Value Range: [0, 1]
Description: Sum of population with regional autonomy and included (EGIP) in this country (as a fraction of total population)
Sources: EPR

2.4.23  cntr_relevance
Type: String
Value Range: NA
Description: R indicates countries where ethnicity is coded as being relevant at least once in the sample period; P indicates countries where only a placeholder group is coded
Sources: EPR

2.4.24  nstar
Type: Double Precision
Value Range: [0, 1]
Sources: EPR
2.4.25  onset_ko_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating conflict onset / ko option
Sources: ACD

2.4.26  onset_ko_terr_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating territorial conflict onset / ko option
Sources: ACD

2.4.27  onset_ko_gov_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating governmental conflict onset / ko option
Sources: ACD

2.4.28  onset_ko_eth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ethnic conflict onset / ko option
Sources: ACD, ACD2EPR

2.4.29  onset_ko_noneth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating nonethnic conflict onset / ko option
Sources: ACD, ACD2EPR

2.4.30  onset_ko_terr_eth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating territorial ethnic conflict onset / ko option
Sources: ACD, ACD2EPR
2.4.31  onset_ko_gov_eth_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating governmental ethnic conflict onset / ko option
Sources:  ACD, ACD2EPR

2.4.32  onset_koTerr_noneth_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating territorial nonethnic conflict onset / ko option
Sources:  ACD, ACD2EPR

2.4.33  onset_ko_gov_noneth_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating governmental nonethnic conflict onset / ko option
Sources:  ACD, ACD2EPR

2.4.34  incidence_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating ongoing conflict
Sources:  ACD

2.4.35  incidence_terr_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating ongoing territorial conflict
Sources:  ACD

2.4.36  incidence_gov_flag
Type:  Integer
Value Range:  [0; 1]
Description:  Binary flag indicating ongoing governmental conflict
Sources:  ACD
2.4.37  incidence_eth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing ethnic conflict
Sources: ACD, ACD2EPR

2.4.38  incidence_noneth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing non-ethnic conflict
Sources: ACD, ACD2EPR

2.4.39  incidence_terr_eth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing territorial ethnic conflict
Sources: ACD, ACD2EPR

2.4.40  incidence_gov_eth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing governmental ethnic conflict
Sources: ACD, ACD2EPR

2.4.41  incidence_terr_noneth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing territorial non-ethnic conflict
Sources: ACD, ACD2EPR

2.4.42  incidence_gov_noneth_flag

Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating ongoing governmental non-ethnic conflict
Sources: ACD, ACD2EPR
### 2.4.43 onset_do_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating conflict onset / ko option  
**Sources:** ACD

### 2.4.44 onset_do_terr_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating territorial conflict onset / do option  
**Sources:** ACD

### 2.4.45 onset_do_gov_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating governmental conflict onset / do option  
**Sources:** ACD

### 2.4.46 onset_do_eth_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating ethnic conflict onset / do option  
**Sources:** ACD, ACD2EPR

### 2.4.47 onset_do_noneth_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating nonethnic conflict onset / do option  
**Sources:** ACD, ACD2EPR

### 2.4.48 onset_do_terr_eth_flag

**Type:** Integer  
**Value Range:** \([0; 1]\)  
**Description:** Binary flag indicating territorial ethnic conflict onset / do option  
**Sources:** ACD, ACD2EPR
2.4.49 onset_do_gov_eth_flag
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating governmental ethnic conflict onset / do option
Sources: ACD, ACD2EPR

2.4.50 onset_do_terr_noneth_flag
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating territorial nonethnic conflict onset / do option
Sources: ACD, ACD2EPR

2.4.51 onset_do_gov_noneth_flag
Type: Integer
Value Range: [0; 1]
Description: Binary flag indicating governmental nonethnic conflict onset / do option
Sources: ACD, ACD2EPR

2.4.52 warhist
Type: Integer
Value Range: N
Description: Count variable indicating number of conflict onsets this country has previously experienced
Sources: ACD

2.4.53 warhistTerr
Type: Integer
Value Range: N
Description: Count variable indicating number of territorial conflict onsets this country has previously experienced
Sources: ACD
2.4.54 warhist_gov

Type: Integer  
Value Range: N  
Description: Count variable indicating number of governmental conflict onsets this country has previously experienced  
Sources: ACD

2.4.55 peaceyears

Type: Integer  
Value Range: N  
Description: Years since country first appears in dataset or since the end of the last ongoing conflict episode  
Sources: ACD

2.4.56 peaceyears_terr

Type: Integer  
Value Range: N  
Description: Years since country first appears in dataset or since the end of the last ongoing territorial conflict episode  
Sources: ACD

2.4.57 peaceyears_gov

Type: Integer  
Value Range: N  
Description: Years since country first appears in dataset or since the end of the last ongoing governmental conflict episode  
Sources: ACD

2.4.58 nightlight_total

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Stable nightlight emissions in country polygon; derived by Cshapes/DMSP-OLS overlay.  
Sources: DMSP, CSHAPES
2.4.59  elevsd
Type:        Double Precision
Value Range: $R > 0$
Description: Standard deviation of gridded elevation measurements (0.008330 decimal degree resolution) intersecting with country polygon (from Cshapes).
Sources:     GTOPO30, CSHAPES

2.4.60  meanelev
Type:        Double Precision
Value Range: $R > 0$
Description: Mean elevation of territory intersecting with group polygon.
Sources:     GTOPO30, CSHAPES

2.4.61  pop90_total
Type:        Double Precision
Value Range: $R > 0$
Description: Country’s population in 1990; derived by Cshapes/CIESIN GRUMPv1 overlay.
Sources:     GRUMP, CSHAPES

2.4.62  pop00_total
Type:        Double Precision
Value Range: $R > 0$
Description: Country’s population in 2000; derived by Cshapes/CIESIN GRUMPv1 overlay.
Sources:     GRUMP, CSHAPES

2.4.63  pop10_total
Type:        Double Precision
Value Range: $R > 0$
Description: Country’s population in 2010; derived by Cshapes/CIESIN GRUMPv1 overlay.
Sources:     GRUMP, CSHAPES
2.4.64  gdp90\_total

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Country’s GDP in 1990; derived by Cshapes/G-Econ overlay.  
Sources: GECON, CSHAPES

2.4.65  gdp95\_total

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Country’s GDP in 1995; derived by Cshapes/G-Econ overlay.  
Sources: GECON, CSHAPES

2.4.66  gdp00\_total

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Country’s GDP in 2000; derived by Cshapes/G-Econ overlay.  
Sources: GECON, CSHAPES

2.4.67  gdp05\_total

Type: Double Precision  
Value Range: $\mathbb{R}_{>0}$  
Description: Country’s GDP in 2005; derived by Cshapes/G-Econ overlay.  
Sources: GECON, CSHAPES
Chapter 3

3.1 Terms and Conditions

By downloading data offered via the GROW Research Front-End (henceforth referred to as RFE), I agree to the following:

1. I agree that any books, articles, conference papers, theses, dissertations, reports, or other publications that I create using data distributed via the RFE reference the bibliographic citation accompanying the data. These citations include the data authors, data identifier, and other relevant information.

2. I understand that the data distributed via the RFE is in part compiled from external data sources and agree that the use of RFE data compiled from external data sources implies acceptance with the terms and conditions associated with these sources.

3. The distributor makes no warranties, expressed or implied, by operation of law or otherwise, regarding or relating to the data distributed via the RFE.
